

## Introduction

This thirteenth edition of the World Prison Population List gives details of the number of prisoners held in 223 prison systems in independent countries and dependent territories. It shows the differences in the levels of imprisonment across the world and makes possible an estimate of the world prison population total. The figures include both pre-trial detainees/remand prisoners and those who have been convicted and sentenced. The information is the latest available at the beginning of October 2021.

The data are presented in two parts. Part one, tables 1-5, sets out prison population totals, rates and trends for each individual country. Part two, tables 6 and 7, provides data on prison population totals, rates and trends by continent. This shows the extent to which prison population levels have grown in the last twenty years, and points to considerable variation between continents and within continents.

The World Prison Population List, like the World Female Imprisonment List (the fourth edition of which was published in November 2017) and the World Pre-trial/Remand Imprisonment List (fourth edition published in April 2020), complements the information held on the World Prison Brief. This is an online database available at [www.prisonstudies.org](http://www.prisonstudies.org), and updated monthly. The Institute for Crime & Justice Policy Research (ICPR) at Birkbeck, University of London, hosts and maintains the World Prison Brief database and publishes the Prison Lists.<sup>3</sup>

The World Prison Population List is compiled from a variety of sources. In almost all cases the original source is the national prison administration of the country concerned, or else the Ministry responsible for the prison administration. Most of the figures are recent and efforts are continually made to update them and to obtain information on the numbers of prisoners in the countries for which figures are not currently available (Eritrea, Somalia and the Democratic People's Republic of North Korea) or are incomplete. We welcome the assistance of readers in notifying us of the latest figures. Care has been taken to ensure that the List is as accurate as possible but we cannot guarantee the reliability of every figure and readers are also invited to draw attention to any errors they notice and, if possible, to supply corrections.

It is hoped that this edition of the World Prison Population List will be useful for policy makers, prison administrators, academic criminologists, non-governmental organisations, other criminal justice experts and everyone who is interested in prisons and the use of imprisonment. The information may prompt fresh thought about prison population trends, and reflections on methods and strategies for reducing reliance on custody – given the high costs and disputed efficacy of imprisonment as a form of punishment, and the fact that severe overcrowding is a feature of prison systems across much of the world.

1 Helen Fair is a Research Fellow at the Institute for Crime & Justice Policy Research (ICPR) and a researcher on the World Prison Brief, a comprehensive online database on the prison systems of the world, which can be accessed free of charge at [www.prisonstudies.org](http://www.prisonstudies.org)

2 Roy Walmsley is Honorary Senior Research Fellow at ICPR in the School of Law, Birkbeck. He founded the World Prison Brief and the World Prison Population List, along with the complementary lists on female imprisonment and pre-trial/remand imprisonment.

3 The first five editions of the World Prison Population List (1999-2004) were published by the Research and Statistics Directorate of the United Kingdom Home Office and the next five (2005-13) by the International Centre for Prison Studies.

### Key points

- ▶ Prison population levels have been affected by various factors linked to the COVID-19 pandemic. In many countries, prisoner numbers fell in the second quarter of 2020, and in some countries, numbers remain lower than they were at the beginning of 2020.
- ▶ This report shows that more than 10.77 million people are held in penal institutions throughout the world, either as pre-trial detainees/remand prisoners or having been convicted and sentenced. Figures for Eritrea, Somalia and the Democratic People's Republic of (North) Korea are not available and those for China are incomplete (see footnote to Table 3 concerning China). Also missing are prisoners held under authorities not recognised internationally and those pre-trial prisoners who are held in police facilities and not included in published national prison population totals. The full total is therefore higher than 10.77 million and may well be in excess of 11.5 million.
- ▶ There are more than 2 million prisoners in the United States of America, 1.69 million in China (plus unknown numbers in pre-trial detention and other forms of detention), 811,000 in Brazil, 478,000 in India, 471,000 in the Russian Federation, 309,000 in Thailand, 291,000 in Turkey, 266,000 in Indonesia, 220,000 in Mexico, 189,000 in Iran, and 165,000 in the Philippines.
- ▶ The countries with the highest prison population rate – that is, the number of prisoners per 100,000 of the national population – are the United States (629 per 100,000), followed by Rwanda (580), Turkmenistan (576), El Salvador (564), Cuba (510), Palau (478), British Virgin Islands (447), Panama (436), St Kitts & Nevis (423), Grenada (413), Thailand (412), U.S. Virgin Islands (394), Bahamas (392), Uruguay (383) and Brazil (381).
- ▶ By contrast, more than half of all countries and territories (53%) have rates below 150 per 100,000.
- ▶ The world prison population rate, based on United Nations estimates of national population levels, is 140 per 100,000.
- ▶ Prison population rates vary considerably between different regions of the world, and between different parts of the same continent. For example:
  - in Africa, the median rate for western African countries is 44.5, whereas for southern African countries it is 248;
  - in the Americas, the median rate for north American countries is 212.5, whereas for central American countries it is 278;
  - in Asia, the median rate for countries in southern Asia is 85, whereas for the countries of south-eastern Asia it is 171;
  - in Europe, the median rate for western European countries is 73, whereas for the countries spanning Europe and Asia (e.g. the Russian Federation and Turkey) it is 253; and
  - in Oceania the median rate is 166.5.
- ▶ Since about the year 2000, the total number of prisoners worldwide has increased slightly more slowly (24%) than the estimated general population over the same period (28%). There are considerable differences between the continents, and variation within continents in change in total prisoner numbers. The total prison population in Oceania has increased by 82%, that in the Americas by 43%, that in Asia by 38% and that in Africa by 32%; in Europe, by contrast, the total prison population has decreased by 27%. The European figure reflects large falls in prison populations in Russia (56%) and also in central and eastern Europe (49%); the prison population in Europe other than Russia has increased by 5%. Particularly large rises have been recorded in south America (200%) and south-eastern Asia (116%).

\* The China figures are for sentenced prisoners only. Figures for pre-trial detention and other forms of detention are not available; more than 650,000 were so held in 2009 (Supreme People's Procuratorate). In addition, it is widely reported that more than a million Uighur Muslims are detained in camps in Xinjiang province.

Figures are not available for:

Eastern Asia: Democratic People's Republic of (North) Korea

\* The figures for Cyprus do not include prisoners in the internationally unrecognised Turkish Republic of Northern Cyprus (TRNC). There were 587 prisoners in TRNC in September 2020.

The figures for France are those for Metropolitan France. Those for French departments and territories in Africa, the Americas and Oceania are shown under those continents in tables 1, 2 and 5.

The figures for Georgia do not include prisoners in Abkhazia and South Ossetia, which have declared independence from Georgia, without international recognition.

By agreement with Austria and Switzerland, some persons imprisoned by Liechtenstein may be held in prisons in those countries.

The figures for Moldova do not include prisoners in the internationally unrecognised territory that has declared independence from Moldova and is known variously as Transdniestria, Transnistria or Pridnestrovie. The territory is reported to have contained more than 3,000 prisoners in 2019.

By agreement with France, some persons imprisoned by Monaco may be held in French prisons.

The figures for San Marino do not show prison population rates because, by agreement with Italy, most persons imprisoned by San Marino are held in Italian prisons and the number of such prisoners is not available.

The 2015 and 2021 figures for Ukraine do not include prisoners in Crimea and Sebastopol and those areas of Donetsk and Luhansk that are not under the control of the Ukrainian authorities.

Sources The figures in the above tables originate almost always from the national prison administrations. Some were obtained indirectly, via the Ministry responsible for prisons, via national statistical offices, via United Nations surveys, via surveys for the annual meetings of the Asian and Pacific Conference of Correctional Administrators, via the Council of Europe Annual Penal Statistics (SPACE) and via U.S. State Department human rights reports.

\*Does not include estimates in respect of the number of prisoners in Eritrea, Somalia and D.P.R.K. (North Korea). For China only the numbers of sentenced prisoners are included.

\*\*Some of the figures on which the totals for about the year 2000 are based are estimates and so the continental totals have been rounded to the nearest 100.

Since about the year 2000 the world prison population total has grown by 24%, which is slightly less than the estimated increase in the world's general population over the same period (28%). There is considerable variation between and within continents.

The growth in the African prison population (32%) is much less than that in the continent's general population (69%). However, this discrepancy is heavily influenced by the figures for Rwanda. Rwanda's prison population is still inflated by the those detained in connection with the genocide in 1994, but many of these prisoners have been released since 2000. Excluding the Rwandan numbers, the prison population in Africa has increased by 42% since 2000.

The growth in the prison population in the Americas since 2000 (43%) is greatly influenced by the trend in the United States, whose prison population is by far the largest but has grown much more slowly than those of many other countries in the continent. Without the figures for the United States, the prison population in the Americas has increased by 138% since 2000: the increase being 77% for central America and 200% for south America.

Prison population trends since 2000 in Asia have varied greatly between the different parts of the continent: total prisoner numbers in south-eastern Asia and in western Asia (Middle East) rose by 116% and 119% respectively while the total in central Asia fell by 44%. China and India, with their high national populations, strongly influence the overall Asian prison population level, but show contrasting trends: the total prison population in China rose by 18%, and in India by 76%. Excluding these two countries, the Asian prison population rose by 52%.

Europe is the only continent that has seen a fall in its total prison population since 2000. The scale of the decrease is heavily influenced by the figures for the Russian Federation: Russia's prison population is by far the largest in Europe and has fallen by 56%. Excluding the Russian Federation, the prison population in Europe has risen by 5% since 2000. Russia is not the only part of Europe that has seen a large fall in its prison population: prisoner numbers in central and eastern Europe (excluding Russia) have fallen by 49% since 2000. By contrast, there has been growth in the other regions of Europe: 2% in western Europe, 3% in northern Europe and 19% in southern Europe.

Oceania's total prison population has grown at a much higher rate than that of any other continent. It is of course dominated by the figures for Australia, whose prison population has risen by 98% since 2000, and New Zealand, whose total has risen by 47%.
